AnySniper

Changing how DeFi is Done

Table Of Content

AnySniper

The AnySniper team is building a cross-chain trading platform with unparalleled functionality that will level the playing field in the DeFi space for the ordinary investor
.
The everyday investor faces numerous challenges in the often cut-throat marketplace of Decentralized Finance. These range from a lack of early information about new projects, inadequate data as to the safety of investing in tokens at an initial stage, inability to monitor investments 24/7 so as to protect from rugpulls and a lack of investment tools allowing them to compete with professional snipers and crypto whales.

AnySniper proposes to demolish these barriers by offering a suite of interconnected trading services which its users can benefit from, in order to make quicker, safer and smarter investments, giving them more robust opportunities to secure profits.

Target Challenges and AnySniper Vision

The idea of AnySniper was germinated from two ostensibly different but fundamentally interconnected concerns in the DeFi space. Between the years 2020-21, blockchain and crypto adoption has risen exponentially. Increasing capital from retail investors finding its way into the nascent marketplace of decentralized finance has created opportunities as well as challenges. None can deny the power of DeFi to offer unprecedented financial freedom to its participants who have hitherto had no option other than TradFi. At the same time (and unsurprisingly), the spike in inflow of capital has also lead to a shocking increase in malicious activity.

For instance, Chainalysis, a leading blockchain data analysis platform, has recently noted in a preview of its 2022 Crypto Crime Report that rugpulls accounted for 37% of all crypto scam revenues in 2021, as opposed to a mere 1% in 2020. It is estimated that $2.8 Billion has been stolen from innocent investors in the year 2021, within the DeFi space and across blockchains.

The average retail investors who typically are not coders and lack connections or insider information find themselves floundering in this fast paced marketplace. Hyped token launches seem appealing but impossible to get into. Call channels announce exciting opportunities where unwitting investors serve the purpose of providing exit liquidity to snipers and friends of developers. The rush to get in early can mean a lack of due diligence on the part of investors where they end up buying into honeypot tokens with identical names.

Thus, the lack of investor education, early warning utilities and early buying tools coupled with an increasing number of malicious developers executing rugpulls has created a highly negative investor sentiment in 2022, creating substantial barriers to the inflow of fresh capital and threatening the very integrity of DeFi.

AnySniper was born when its lead developer, a successful DeFi trader, decided to publish his trading tools for use by the average investor. The intention behind this is to undo the damage wreaked across different blockchain ecosystems by malicious developers and revive investor confidence in decentralized finance. To this end, AnySniper is being developed by an experienced team of professionals who are passionate about the future of blockchain and cryptocurrency and committed to building a platform which changes the way DeFi is done. The proposed trading platform is being constructed to offer cross chain services, seeking to level the playing field for all players in decentralized finance.

AnySniper Solutions Suite

The AnySniper platform presently under development is an advanced version of a bot that has already been put to use over 2021 by its developer. Observing the rapidly deteriorating DeFi space with alarm, the developer behind AnySniper and his team decided to add features that protect investors and equip them to trade more intelligently, with greater market awareness.

Thus, the AnySniper platform at launch will possess the following functionalities:

A. Instant Contract Read.
Instant analysis of the contract code for every token as soon as it is deployed in the blockchain network, even before it is available for trading on an AMM like Uniswap or Pancakeswap, by reverse engineering the Solidity bytecode of the target token so that investors do not need to wait for the contract owner to publish its source code.

B. Contract Analysis Bot

The AnySniper Contract Analysis service provides investors with a wide range of data points on any target token, including its name, symbol, contract addresses of the token and that of its owner. Other data points include:

- The balance in the owner's wallet,

- Transaction tax for buy & sell orders (identify potential honeypot tokens before they are launched),

- Slippage required for successfully executing token transactions

- Max transaction limits imposed by the contract creator for various reasons, including anti-whale measures

- Max wallet size permitted by the target token contract

- Contract functions identifying when its owner adds liquidity and permits token trading.

- The number of dead blocks at launch, identifying the first safe block for trading.

C. Anti Rugpull Measures

AnySniper performs live tracking of the actions executed by token-owner wallets on the blockchain, providing sufficient warning to AnySniper users and pre-empting rugpulls by ensuring that AnySniper users are able to sell their tokens before the malicious developer can pull liquidity from his own project.

D. Take Profit / Stop Loss

AnySniper is the first trading platform in DeFi to offer a Take Profit / Stop Loss functionality across the leading blockchains in the world, allowing investors to:

- Identify the target profit price (or profit percentage) at which they want to liquidate their token holding in any project — AnySniper sells automatically when the target is hit.

- · Identify the target loss price (or loss percentage) at which they want to liquidate their token holding in any project — AnySniper sells automatically when the target is hit.

E. Multi-Wallet Management

AnySniper users can monitor and manage their multiple wallets via the platform's dashboard.

This will include the ability to use the AnySniper snipe function simultaneously from multiple wallets, as well, thereby reducing the possibility of hitting max wallet limits and risking gas feels lost on failed transaction due to inadequate slippage during hyped launches.

F. AnySniper Sniping Utility

As stated before, the AnySniper platform was born from a bot that has been put to effective use by the team behind the project.

Taking note of the rapid loss of trust in the DeFi space, the lead developer decided to modify the bot, add functionalities and create a platform with open access to all investors so that they could utilize the very same investment tools.

Investors with a specific token holding will be granted unrestricted access to the AnySniper Sniping Utility which will place them on par with the best snipers in business.

This utility works not only for tokens but also for intelligent and prompt acquisitions of NFTs, providing diverse opportunities for AnySniper users.

G. AnySniper Launchpad

After the initial stages of platform launch and adoption, having earned investor confidence by delivering on our commitment to reducing rugpulls and avoiding honeypots, AnySniper will work towards incubating an in-house launchpad for third party projects across the leading blockchain networks.

AnySniper Launchpad will offer projects where the Developers are doxxed to the AnySniper platform and contracts are vetted for integrity.

The success or failure of any project are subject to market forces, but Launchpad projects will benefit from the reputation of safety that we shall develop over time. of safety that we shall develop over time.

$SNIPE TOKEN

The $SNIPE token was launched on January 23, 2022, with a max supply of 1,000,000,000 (1 Billion) tokens, all having entered circulation upon launch. Ownership of the $SNIPE contract has been renounced.

The underlying purpose of the $SNIPE token is a tokenization of the utilities offered by the AnySniper platform. Holders of $SNIPE will be granted tiered access to the AnySniper suite of services depending upon the extent of their token holding, with holders possessing more than 8 Million $SNIPE tokens being granted unrestricted access.

All profitable trades executed by AnySniper Sniping Utility users will be subject to a tax and the funds accumulated thereby shall be reinvested into further project development.

Buy and Sell transactions of $SNIPE are taxed at 12% each, distributed as under:

● **Marketing : 5%**   ● **Development : 4%**   ● **Liquidity : 3%**
IN SUMMARY

We envision a cross chain trading platform which places trading information instantaneously at the fingertips of the normal retail investors in the DeFi space, empowering them to make quick, informed and intelligent trading decisions. Whilst empowering our investors, we intend to protect them from falling prey to the machinations of malicious developers that are increasingly plaguing DeFi. By doing so, our intention is to ensure that investor capital goes to deserving projects build by genuine and transparent crypto developers. Blockchain and cryptocurrency will lay at the heart of human innovation in the years to come, and we intend to be an integral part of this journey.
